

Remote Welding with Solid State Lasers

Filesize: 8.78 MB

Reviews

The publication is great and fantastic. It is probably the most remarkable book i actually have read through. Its been printed in an exceedingly easy way and it is merely right after i finished reading through this publication where in fact altered me, modify the way i think.
(Tomas Witting)

REMOTE WELDING WITH SOLID STATE LASERS

To get **Remote Welding with Solid State Lasers** PDF, make sure you follow the link listed below and save the ebook or have accessibility to additional information which are in conjunction with REMOTE WELDING WITH SOLID STATE LASERS book.

Cuvillier Verlag Mrz 2006, 2006. Taschenbuch. Book Condition: Neu. 209x147x12 mm. Neuware - As a young technology on the verge of application in series production, literature on remote welding with solid state lasers is still rare to find. The thesis at hand probably is the first encompassing text on this subject. Therefore a broad introduction into remote welding setups is given, including those with CO₂ lasers for which more experience exists. Robot based CO₂ laser systems suffer from a cumbersome beam delivery, which is the reason why gantry machine beds are preferred. This restriction does not exist for YAG lasers, and as a consequence more flexible systems assisted by standard articulated robots can be devised. Furthermore, an overview on remote welding process characteristics is covered. The seminal difference to conventional laser welding (or any other joining technology) is the remarkably low amount of auxiliary processing times resulting from high speed focus displacement. This is achieved by means of rotating optic units or components, favourably supported by long working distances and angular beam incidence. Process development differs in only few aspects from common laser welding, for instance shielding gas supply. Following this delineation of basic remote welding principles, suggestions on system design are given. After an extract of optics fundamentals, lens design for a welding head with large operating range is proposed. As the prevailing optic units for remote welding with solid state lasers are galvanometric scanners, their buildup is discussed, as well as postobjective scanners with alternate optomechanical designs. System development incorporates other aspects besides optic units, and thus some ideas on production oriented workpiece design are covered. Moreover, the chapter includes layouts of two laboratory clamping devices which enable fast process development and welding of thin steel foils. One of the main criteria of a manufacturing system is its...
